

**RAISING  
THE BAR FOR  
ENVIRONMENTAL  
REMEDIATION**

## TRUSTED ENVIRONMENTAL REMEDIATION EXPERTS

The ECA was founded in 1996 by a group of highly qualified environmental contractors committed to raising the standards of the industry. Working closely with legislators, industry experts and labor management, the ECA establishes best practices, standard procedures and safety initiatives which our members have committed to follow with ensured compliance monitored by ECA certified supervisors.

Today, the ECA represents the top environmental contractors in New York City who are dedicated to:

- Creating comprehensive standards for the remediation industry
- Ensuring safety on all projects
- Promoting industry advancement in knowledge and safety

## RAISING THE BAR FOR ENVIRONMENTAL CONTRACTORS

The ECA is an advocate for higher standards and strict safety protocols for environmental contractors.

We believe that all contractors should be held to the same high standards for safe remediation. ECA contractors require that their workforce maintain the highest quality skills and safety training for all work performed. We continuously work to raise awareness regarding the importance of training and provide informational seminars for environmental contracting professionals.

## INVESTING IN THE FUTURE

The ECA is setting the standard for safe, effective environmental remediation practices through:

- \$10 million invested in training the ECA-certified workforce
- Partnering with government and industry leaders to develop best practices and protocols
- Ground-breaking Labor-Management Safety Compliance initiative
- Formation of the Environmental Advisory Council to discuss environmental issues that affect multiple industries and various types of facilities

## WHAT YOU DON'T KNOW ABOUT YOUR FACILITY CAN HURT YOU

Your facility may be at risk without trained professionals available to handle environmental hazards and emergencies.

ECA contractors are qualified to perform environmental remediation, emergency remediation and infectious material control services through the ECA's rigorous training and certification program.

ECA members are qualified to perform services including:

- Removal of hazardous materials and debris
- Emergency cleaning and repairs
- Asbestos, mold and lead abatement
- Infectious organism cleaning and bacterial/biological emergencies
- Fire and flood restoration services; among others

**ECA contractors offer 24/7 emergency response services for any disaster**

## WORKING FOR YOUR HEALTH

The ECA is building awareness regarding hazardous materials and infectious airborne pathogens to help reduce liability and costs for facilities owners and managers, particularly in the healthcare industry. Many healthcare institutions are cutting back costs, but still strive to achieve the same high levels of safety and cleanliness for their patients. Preventing the harmful impact of infectious organisms in these sensitive environments is a crucial goal for healthcare professionals and administrators.
